M-1. Supporting Documentation for General Education Course Criteria (optional):

If documents beyond this course outline may demonstrate how any or all of the course design criteria are incorporated in the course, such as an example course syllabus, please attach here (optional; not required).

Syllabus_ CCC MTH 108 Data Science Explorations.pdf

Any additional notes/comments:

The syllabus information is meant to be used across multiple institutions using the MTH-108 course. In the "Course Content" section, Student Project lines call out SLOs - almost all projects call out all SLOs as the course uses a "spiraled" approach to attaining learning outcomes. This means that students encounter opportunities to develop and solidify achievement in all outcomes in each course Module.

M-1. General Education Criteria For Course Design:

A. Does the course design require students to "Use the tools of arithmetic and algebra to work with more complex mathematical concepts"?

Yes

Is it evident in your course outline? If so, check all that apply below.

Major Topics

Criteria are not always easy to discern from course outlines. You are welcome to include any additional comments, clarifications, and/or supplemental documents which may help faculty reviewers confirm that the course is designed to incorporate the Gen Ed criteria consistently in all course sections.

Arithmetic and algebra can be less obvious in data driven courses. They are used throughout, but are particularly clear to all observers in the Regression and Correlation section where common algebra structures are used in modeling best fit functions.

B. Does the course design require students to "Design and follow a multi-step mathematical process through to a logical conclusion and judge the reasonableness of the results"?

Yes

The Data Science Cycle is itself a multi-step mathematical process to develop appropriate conclusions about data. This is the foundation of the course. See syllabus.

C. Does the course design require students to "Create mathematical models, analyze these models, and, when appropriate, find and interpret solutions"?

All data visualizations are mathematical models. Students will analyze and create these models throughout the course. The typical understanding of "solutions" in a mathematics course does not apply to data science as there are no "right answers", but rather a myriad of appropriate answers that consider the complex aspects of data collection design, bias, ethics, and impact. Students will learn about and become proficient in analyzing the merits of conclusions from data as well as authoring their own conclusions.

D. Does the course design require students to "Compare a variety of mathematical tools, including technology, to determine an effective method of analysis"?

The technology tools being used are hand drawn data displays, data dashboards, spreadsheets, and the R programming language. These will explore various mathematical tools related to data cleaning, organization, visualization, and analysis.

While present in the Course Description and SLOs, this is particularly evident in the Course Content section of the syllabus. Additionally the spreadsheets module of the course is attached to see more specific examples of the kind of formalization (terms, notation, symbols) students encounter and learn to use effectively.

M-2. General Education Outcomes – Student Learning Outcomes Crosswalk:

General Education Outcomes (GEOs)

| SLOs | Comments |
|---|---|
| Analyze real world data, making and evaluating predictions, and identifying potential errors, sources of bias, and issues of ethics. | Making and evaluating predications requires the use of appropriate mathematics for the particular variables of a data set. Errors, bias, and ethics determine whether any data mathematics can be applied to a scenario. Appropriateness is both a question of whether you can and should apply mathematics to a problem in data science scenarios. |
| Utilize appropriate technology, including programing and spreadsheets, to organize, evaluate, visualize, and analyze data. | Appropriate technology is a form of appropriate mathematics in the modern era. |
| Apply the data science cycle to develop and answer statistical questions about univariate, bivariate, and multivariate data. | Answering statistical questions is the form that "solving problems" takes on in a data driven course. Univariate, bivariate, and multivariate data have unique approaches requiring that students learn the appropriate tools for each. |
| Create clear and compelling communications in multiple formats, including data visualizations with supporting narratives, for specific audiences. | The solving of a problem with data is nuanced. There are no "right answers". Thus a clear and compelling presentation is needed to truly address problem solving when using data. |
| Develop identity-informed confidence and agency as emerging data scientists to engage in ethical data practices and decision making. | Authentic engagement is the foundational prerequisite to using appropriate mathematics to solve problems. Identity-informed learning fosters belonging which is required for engagement. |

| Apply the data science cycle to develop and answer statistical questions about univariate, bivariate, and multivariate data. | This SLO specifies the range of data scenarios that students will conduct the entirety of the GEO. Univariate, bivariate, and multivariate data will be recognized, analyzed, interpreted, validated, and communicated. |
| Create clear and compelling communications in multiple formats, including data visualizations with supporting narratives, for specific audiences. | This SLO represents the interpretation, validation, and communication of results in data scenarios. |
| Develop identity-informed confidence and agency as emerging data scientists to engage in ethical data practices and decision making. | While fundamentally being an outcome about the importance of fostering a sense of belonging for students, the GEO calls for engagement in authentic problem solving. This SLO focuses on the very realistic considerations of ethical data practice and decision making required in every field. |

M2) Pages 23-26 of the Module 3 Organizer describe a project to create a Policy Memo based on the data analysis they have done with data. This data set is new, but related to the data used in earlier work on spreadsheets. Thus they have are independently creating a full analysis of a
